Statement

### Chapter 1 - Introduction and Literature Survey

1.1	Introduction	1.1
1.2	Compressional Alfven Waves	1.11
1.3	Helicon Waves	1.12
1.4	Electron-Cyclotron Waves	1.13
1.5	Discussion	1.14

### Chapter 2 - Alfven Wave Experiments

2.1	Introduction	2.1
2.2	Theory	2.2
2.3	Experimental Apparatus	2.5
2.4	Diagnostic Equipment	2.10
2.5	Experimental Conditions	2.11
2.6	Wave Velocity	2.15
2.7	Wave Attenuation	2.18
2.8	Conclusions	2.20

	Page
<u>Chapter 3 - Theory of Helicon wave propagation.</u>	
3.1 Propagation of Waves in an Infinite Medium of Uniform Density	3.1
3.2 Propagation in a Uniform Cylindrical Plasma	3.3
3.3 Energy Distribution of a Helicon Wave in a Uniform Cylindrical Plasma	3.6
3.4 Dependence of Helicon Wave Radial Structure on Electron Inertia	3.10
3.5 Dispersion of a Standing Helicon Wave in a Non-Uniform Resistiveless Cylindrical Plasma, Including the Effects of Electron Inertia	3.23
(a) Conducting Boundaries	3.27
(b) Rigid Non-Conducting Cylindrical Boundaries	3.27
Appendix A	3.37
<u>Chapter 4 - The Case of Low Resistivity plasmas</u>	
4.1 Introduction	4.1
4.2 Experimental Considerations	4.1
4.3 Collisionless Damping Mechanisms	4.14
<u>Chapter 5 - Experimental Apparatus</u>	
5.1 Introduction	5.1
5.2 Large System	5.1
5.3 The Solenoid	5.7
5.4 Production of the R.F. Magnetic Field	5.11
5.5 Small System	5.18

Chapter 6 - Diagnostic Procedure and Theory

6.1	Introduction	6.1
6.2	Magnetic Probes	6.1
6.3	Langmuir Floating Double Probes	6.6
6.4	8 mm Microwave Interferometer	6.11
6.5	Spectroscopic Measurements	6.19
6.6	Spectroscopic Discussion	6.24

Chapter 7 - Results and Discussion

7.1	Introduction	7.1
7.2	Probe Measurements of Magnetic Field	7.2
7.3	Langmuir Probes	7.11
7.4	Microwave Interferometer	7.12
7.5	Interpretation of Spectroscopic Measurements	7.17
7.6	Discussion	7.23
7.7	Possible Studies Arising from this Work	7.34
